WEATHER SYNOPSIS BY REGION

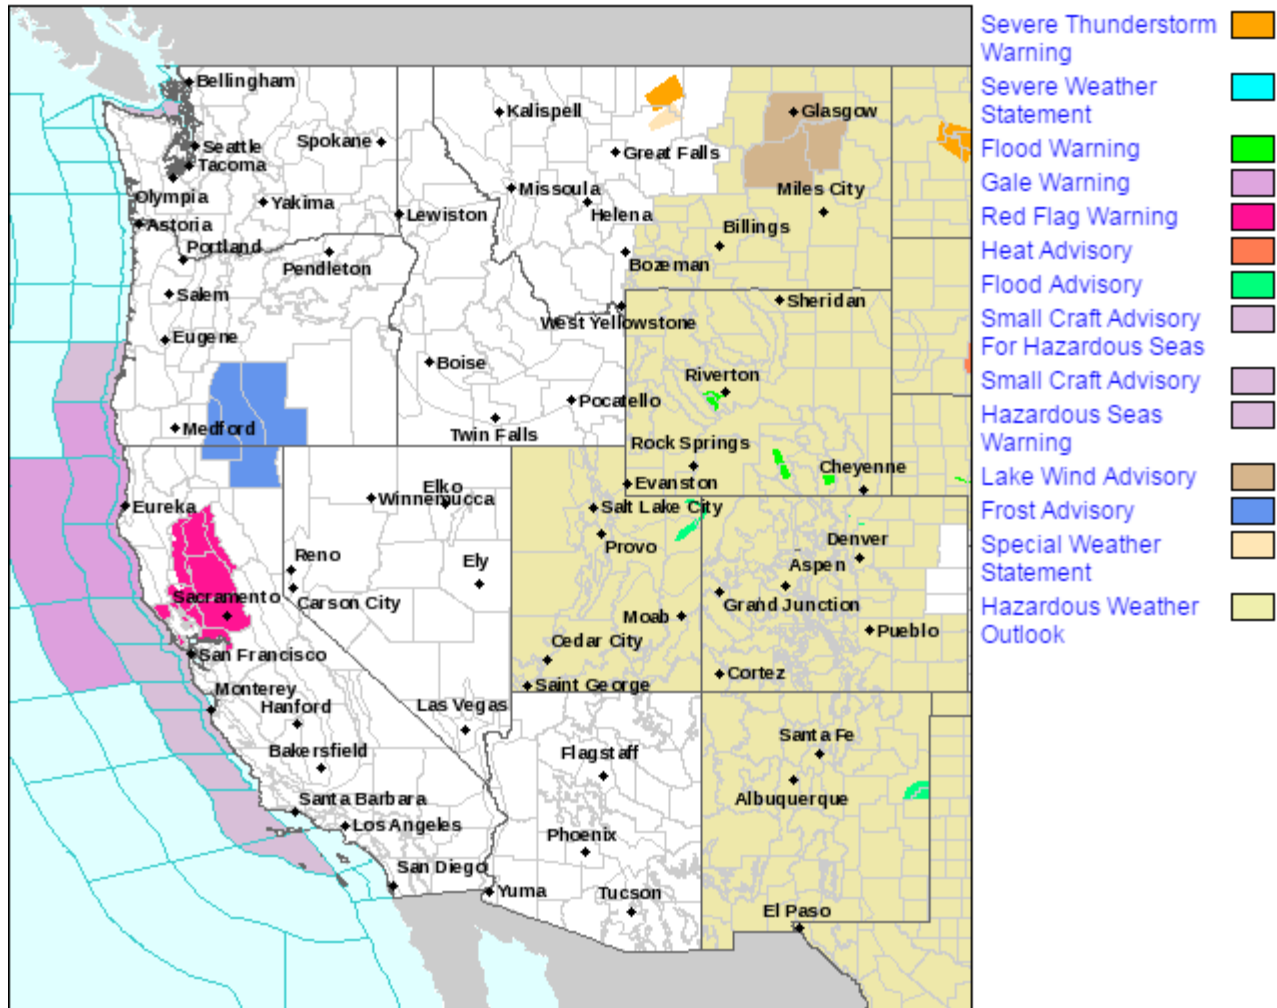

NORTHERN CALIFORNIA

Low pressure just west of the Pacific NW will move into WA later today. The associated trough along the West Coast will move slowly east. Some light showers are expected in the far northern areas near the Oregon border today, but wetting rain (0.10 inch) will be hard to come by. There is a slight chance of isolated afternoon/evening mountain thunderstorms in the north today. Winds ahead of the trough - from the Cascade-Sierra crest east - will increase out of the S to SW today, reaching 25-35 mph with gusts to 40 mph. Winds will be stronger just to the east and southeast. RH will be 12-20% during the afternoon when the strongest winds are expected. As the trough passes over the central part of Northern California this afternoon and into eastern areas today, winds east of the crest will die off, but northwest to north winds will increase in and around the Sacramento Valley. Northwest to northeast winds in and around the Sacramento Valley will reach 20-30 mph with gusts to 40 mph Saturday morning and continue at slightly lighter speeds throughout the day and overnight, finally ending noon Sunday. RH will drop to 10-17% Saturday afternoon. Also, a weak low will be moving across Southern California with the trough this weekend, and enough moisture will wrap around it to bring a slight chance of some showers or isolated thunderstorms to the Tahoe area Saturday and Sunday. Another low pressure trough will drop south from the Gulf of Alaska early next week for a close repeat of the weather expected into this weekend, although it will probably be warmer. Gusty afternoon winds will return early next week as well.

SOUTHERN CALIFORNIA

A weak disturbance pushing up from the southeast today may bring a few showers to Southern California this afternoon and tonight, mainly affecting the mountains and deserts. Meanwhile, an area of low pressure in the Pacific Northwest will help drive a trough southward this weekend. The combination of the trough, onshore flow, and a deep marine layer along the coast, will all help to bring significant cooling to the region in the coming days. In fact many inland areas will experience below normal daytime highs by Sunday. In addition to the cooler weather, there may be enough moisture and instability both Saturday and Sunday to produce scattered thunderstorms across the Sierra. Storm movement will be to the northeast which will keep any potential lightning activity out of the lower elevations. West winds of 15-25 mph with gusts to 35 mph can be expected during the afternoon and evening hours today and Saturday in the Kern County Mountains, Antelope Valley, Banning Pass and the eastern side of the Cleveland National Forest. Across the coastal areas, night and morning low clouds and fog will become more widespread with only partial afternoon clearing in some areas. By Monday and Tuesday, the trough will be to the east of the region with a dry westerly flow aloft prevailing over the district resulting in warmer and drier weather.
